

# Final Task 1

Write a class called as CustomerDirectory. The class will have the following private member data/attributes.

Member Data/ Class Attributes	
Private	char cusFirstName[30]
	char cusLastName[20]
	char cusDoB[10]
	char cusTelNum[13]
	char cusCountry[20]

The class will have following member functions/methods.

Member Function/Methods		
Public	Void setCusInfo() {  //write the method }	In this method, you will set the customer's first  and last name, with Date of Birth, telephone number and customer's country.
	Void getCusInfo() {  //write the method }	In this method you will show the customer's details on the console.

Create two objects cus101 and cus102 in the main(). Access both methods with two objects and show the output.
